BESKRIVNING

ScatterZone Theory 1 The untold story about climate change ? A search for game-changing awareness At 200 nation's UN conference in Poland, December 2018. a 15 years old girl, Greta Thunberg, told UN summit: "...You are not mature enough to tell it like it is. Even that burden you leave to us children." Thank you Greta ! These words made me wake up and write this book and release it only 3 weeks later. I felt a heavy responsibility as I would like to describe the climate crisis from a totally different perspective, after my best ability. We urgently need this kind of discussion. The goal has been to write the book in such a way that every 15 years old child can understand it. I am a Swedish engineer specialized in thermodynamics and computer simulations. For the last two decades I have been working with technology for climate solutions. 10 years ago I found, just from curiosity, that an old scatterplot from the Vostok Ice core measurements has all the answers that Greta is asking for. The answers have been hiding there for almost 50 years and nobody seemed to care. Just by looking at it you can see that we have programmed the atmosphere for +25C over temperature. The same type of scatterplot over the ocean's history reveal that we have programmed for +40m sea level rise. Nobody can stop all this unless CO2 is reversed and forced back to year 1700. The rest is pure mathematics. We can even calculate exactly what has to be done and how fast. If we find the true background for climate change we can find true solutions with an almost 100% success to repair the atmosphere. Just look at this image: It is all you need.....

Effects and Impacts of Climate Change - Results and Consequences

ScatterZone Theory 1 The untold story about climate change ? A search for game-changing awareness At 200 nation's UN conference in Poland, December 2018.

How to Determine the Slope From a Scatter Plot... - YouTube

The phrase "climate change" triggers images of a huge, global phenomenon. Rising seas. Helmuth has built his career on trying to better understand how mussels experience temperature and other environmental changes, and he argues it's essential to look beyond our own human perspective...

10 Reasons That Prove Climate Change is Real - Earth Eclipse

A changing climate can affect the diversity of an ecosystem. A rapidly changing climate may mean an ecosystem will not cope. From a human perspective, the rapid climate change and accelerating biodiversity loss risks human security (e.g. a major change in...
